# Invitation LNG in the future Energy Mix of Northwestern Europe

Breakfast seminar Tuesday May 1st

Rotterdam's GATE LNG Terminal in the Nijlhaven has an initial throughput capacity of 12 billion m<sup>3</sup> (bcm) per annum.  
Photograph by: Worcflow

In a continuous effort to diversify the energy supply and in line with sustainability goals the opportunities for natural gas are rising in the Western European markets. And with the LNG gate terminal in the Port of Rotterdam and Europe's largest, open-access gas storage in Bergermeer just North of Amsterdam the Netherlands offers an excellent infrastructure to accommodate the future imports as a gateway to Europe. But what else is needed to shift energy systems in Western Europe and how can you join in on these new opportunities?
